C90/C90GT/C90GTI PERFORMANCE SYSTEMS

10,500 POUNDS

INCREASED GROSS WEIGHT

RAISBECK'S C90 EPIC PERFORMANCE SYSTEM

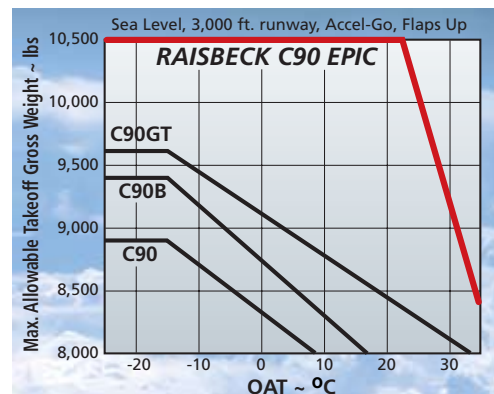

CERTIFIED WORLDWIDE AND AVAILABLE EXCLUSIVELY THROUGH RAISBECK AUTHORIZED DEALERS

“Raisbeck’s C90 EPIC has exceeded my expectations. Whether you run at 1900 or back off to 1750, you don’t lose any performance. And it’s just wonderful how quiet the cabin is.” – John McKittrick, Original Owner, C90B LJ-1737

ACHIEVING A COMPETITIVE EDGE in today’s aircraft market is simplified with the advanced technology made available to you from Raisbeck Engineering. Raisbeck Performance Systems are meticulously engineered to enhance specific operational areas of the Beechcraft King Air C90 family of aircraft. Our engineers took a holistic view of the Beechcraft C90 aircraft, and infused our performance systems into each model. Encompassing the benefits of all of our individual performance systems, we created the C90 EPIC, standing for the grand performance that results from the synergy of the combined systems.

C90 SERIES EPIC ELEMENTS

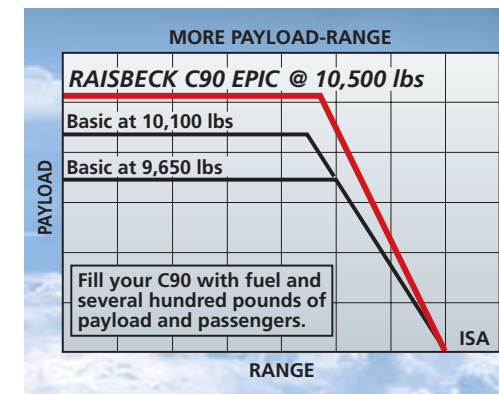

OPTIONAL EQUIPMENT

TRANSFORM YOUR BEECHCRAFT KING AIR C90 into the best performing business aircraft on the market with our advanced performance engineering. That’s not bragging. Well, maybe it is! Our performance benefits are most-enjoyed mid-flight, so go ahead, take us for a spin.

Benefits

“We are enjoying the benefits of the Raisbeck EPIC and its new props. Immediately, I noticed the difference in acceleration on takeoff, even with its heavier payload. Climb and cruise are better too, especially at the higher altitudes. Landing distances are also shorter when using the props to decelerate. Perhaps the biggest benefit to our flight operation is the higher gross weight limit. This provision has allowed me to carry an additional passenger or another half hour of fuel on board where I would not have been able to otherwise. I am proud to fly this exceptional King Air. These Raisbeck systems have made this great airplane even better.” – Ben Kester, C90B LJ-1686

RAISBECK/HARTZELL QUIET TURBOFAN PROPELLERS

With over 1,000 installations to date, our Quiet Turbofan Propellers have been providing C90 operators with increased performance through our innovative blade and hub design. Each propeller is individually manufactured by Hartzell Propellers, the worldwide leader in advanced propeller manufacturing technology.

- Lightweight aluminum hub and blades
- Computer-milled and machined for inherent balance
- Oversized hydraulic piston for absolute lock-in propeller synchrophasing
- Grease-lubricated to preclude leaks
- Extended airfoil section (into the spinner)
- More root to tip twist (46°+15°)

DUAL AFT BODY STRAKES

With over 25 years of proven performance, our Dual Aft Body Strakes are the ideal companion to our Quiet Turbofan Propellers to complete our EPIC package. Standard on Hawker Beechcraft’s 350 series aircraft production line, they replace the standard ventral fin to provide C90 operators greater control and handling qualities in-flight.

- Reduces drag in all flight modes
- Extends stringer fatigue life
- Raisbeck Strakes are a key element in every EPIC package

GROSS WEIGHT INCREASE

The Raisbeck C90 EPIC (including all C90, C90-1, C90A and C90B aircraft, Serial Numbers LJ-527 and subsequent) is able to take off with more weight at a hotter temperature than the basic C90 series aircraft.

“We are very pleased with the Raisbeck EPIC installed on our C90. The Quiet Turbofan Propellers provide a quiet cabin and great performance. The Crown Wing Lockers are great for keeping our guns, fishing rods and skis out of the cabin. Having EPIC installed gave us the gross weight increase, too—a huge benefit to us, because it’s one more person and additional gear!”

– David B. Erickson
President, King Air C90 LJ-1194

CROWN WING LOCKER SYSTEM

The Crown Wing Lockers are FAA-Certified to carry 600 pounds in 17 cubic feet of secure storage space. The Lockers are designed to be area-ruled to reduce drag and stall speeds. Constructed of lightweight, infinite-life composites, they are easily removed and are fully self-contained to ensure a clean, dry interior in all weather.

- Carry larger equipment, luggage and medical equipment outside the cabin
- Make room for additional passengers
- Secured with Medeco safety locks
- Fully certified for commercial and private operations

WHY RESTRICT YOURSELF?

Our C90 EPIC Performance System allows you to take off with an increased gross weight of 400-850 pounds, depending on your C90 model. This is available for additional fuel to turn that one-stop trip into a non-stop, extra payload, or both.

CONTROL YOUR FLIGHT DESTINY

Raisbeck enhanced C90s are able to take-off and land in thousands of additional airports, removing operational restrictions. Use up to 10 percent less runway, and choose your destination. Our engineering technology is critical—your time is invaluable.

ARRIVE WITH A COMPETITIVE EDGE

With our Quiet Turbofan Propellers, we offer you and your passengers a truly state of the art flight experience in a much quieter environment. Leave the distractions behind and focus your creative energy in the sky without noisy interruptions. Or, simply enjoy the cabin’s peace and quiet and arrive to your destination rested and energized. Let your competition deal with noise fatigue.

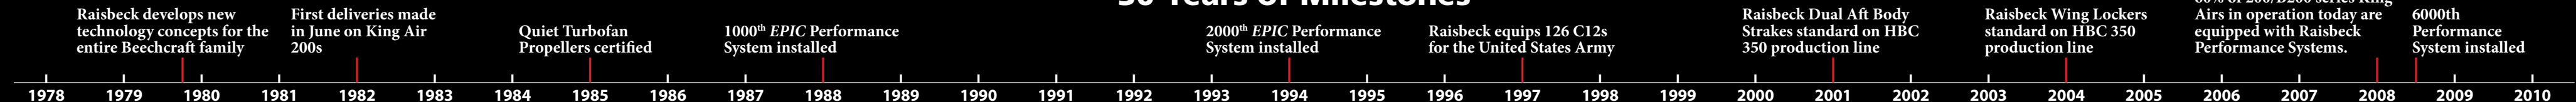

A RAISBECK-EQUIPPED C90 OUTPERFORMS THE REST

Enjoy increased operational flexibility and productivity. Raisbeck’s C90 EPIC removes the aircraft’s operational loading restriction, allowing 2,573 pounds to be used as fuel, payload, or both. Leave your competition in the dust. Impress your friends. Impress yourself.
